

How To Improve on File Management?

Sebastian Faubel

Boston, 8.October 2008

Usability Basics

INPUT

- Pointing
- Typing

OUTPUT

- Visual
- Acoustic

Best Practises

- Use as many communication channels as possible!
- **But do it in a reasonable, natural way!**

GOOD

- Present images visually
- Support human recognition

BAD

- Show dogs in search dialogs
- Not helpful, Annoying

People tend to think in Categories / „Drawers“

- ODT File: Document
- OGG File: Music

Knowledge Discovery Metaphors

- **Search** – requires knowledge
- **Browse** – lets you discover knowledge
- **Support both!**

Hierarchical File System

Technical / Abstract data structure

- People don't get it
- Causes problems
- No Metadata

Hard to maintain

- Large file base today
- Works for only one device (locally scoped)
- **Not future proof**

Requirements

- Target a broad user audience
 - Experienced users
 - Intuitive users
- Support individuals and corporations
- Interoperable, Portable
- **Real world solution!**

- ISWC Poster, Layer overview

- **Organise Desktop Live Presentation**

Please Note

- Focused on implementation/technology
- Presented interfaces are really raw

Note On Tags

- **Expect a computer to help you?**
 - You need to tell him how!
- **Imagine a robot helping you with your housework**
 - Would you paste tags on everything? The fridge, doors, windows, lockers...

Thank you very much!

- Are there any questions?
