    - Changwoo Ryu (cwryu@debian.org)

    - Young-Ho Cha (ganadist@gmail.com)

Contents

Goals

These days, interest in Linux is growing in Korea and most people are using Linux based products.

In the industry, big companies like LG and SAMSUNG already have been making a lot of Linux-based products such as Android smart phone and smart TV.

Also, a lot of students and developers want to know and learn about Linux, but many people don't know about GNOME.

In this summit, we want to make many Korean developers and users share their experiences & skills and attract many people to GNOME & Linux world.
